Warsaw, February 2023

**Warsaw Branch and the Inter-enterprise Club
of the Association of Communications Engineers and
Technicians of the Republic of Poland
at PKP Polskie Linie Kolejowe SA Diagnostics Centre,
and the Railway Research Institute in Warsaw
invite you to participate in:**

**FOURTH MEETING
OF RAILWAY DIAGNOSTICS**

Warsaw - 2023

11–13 October 2023

ORGANISERS of the periodic event started in 2012 in Zawiercie – „**MEETING OF RAILWAY DIAGNOSTICS**” – inform regular attendees, supporters, and potential newcomers that, with the period associated with the significant restrictions associated with the Covid 19 pandemic over, it is time to reconvene those involved in the wide-ranging diagnosis and maintenance of railway infrastructure and trackside equipment during:

FOURTH MEETING OF RAILWAY DIAGNOSTICS

Warsaw – 2023

The event is planned between **11–13 October 2023 in Warsaw.**

This information is sent to reserve your time to attend the event, where you will be able to have meaningful discussions, exchange experiences, and acquire new or

consolidate existing knowledge. The early announcement allows you to save the date in your annual work schedule for 2023.

The main theme of the **fourth** edition of the **MEETING OF RAILWAY DIAGNOSTICS** is: **"Using the experience and looking ahead"**.

We assume that in the course of exchanging experiences about the technical and technological solutions applied, the difficulties encountered and ways of solving them in the measurement and diagnostic testing of the rail infrastructure and more, we will jointly provide justification for the above main theme of this edition.

The organisers are hoping to provide an opportunity for representatives of other infrastructure managers, contractors, and research bodies to share their experiences.

As in previous years, the Meeting is dedicated to a wide group of people involved in the diagnostic and maintenance technologies for railway superstructures (railway tracks of various gauges, for trams and for underground), of PKP Polskie Linie Kolejowe S.A. and of contractors, to senior, and middle management, especially technical – staff responsible for maintenance and implementation of investments and contractors working on railways, suppliers of technologies, materials, and diagnostic equipment, and all those interested in the topic.

Due to the Covid 19 pandemic, the planned Meeting was moved from 2021 to 2023; five years have passed then, during which the development of diagnostic techniques and technologies have continuously progressed. Therefore, we believe that during the Meeting, we can expect a lot of news on the topic of railway infrastructure diagnostics from scientific, business, and practical perspectives.

We invite you to actively participate in our event.

On behalf of the Organising Committee

Robert Kuszewski

Ireneusz Jasiński
